Outer limits of subdifferentials for min-max type functions

Abstract: Outer limits of subdifferentials is a limiting construction that can be used to estimate the error bound modulus in a range of problems. We present some new results related to the evaluation of such limiting subdifferentials for max-type and min-max functions. This talk is based on joint work with Andrew Eberhard and Tian Sang.

Speaker: Vera Roshchina

DECRA Research Fellow

School of Science

RMIT University and Federation University Australia

Fecha: Viernes 7, a las 13 horas.

Lugar: Seminario de Matemáticas, Facultad de Ciencias.
